

Stone Crusher

Stone crusher is commonly used in mine, melting, building, road, railway water conservation and chemical industries. The most commonly used stone crushers are: jaw crusher, impact breaker, pneumatic selective crusher, hammer crusher, impact crusher, roller crusher and combination crusher. Characteristics of jaw crusher are: big reduction ratio, even granularity, simple structure, stable running, handy maintenance and economical operation. The PF-I series of impact crusher processes materials with side length between 100-500mm and maximum compression strength of 350Kpa; the PF-II series of impact crusher is used for crushing of medium rigidity materials like limestone in cement plant.

Stone crusher technical parameters

河南红星矿山机械有限公司

HENAN HONGXING KUANGSHAN JIQI YOUXIAN GONGSI

Size of feed inlet(width×length)	600×900mm
Trimming scope	75—200mm
Maximum feed granularity	480mm
Revolution of eccentric shaft	250Y/min
Processing volume	56—192t/h
Net weight of machine	20t
Outside size(l×w×h)	2320×2300×2380mm
Electrical machine	Y315M-8 75KW 740Y/min
